                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A novel cytokine (AAW19777), designated Apo-2 ligand, induces mammalian cell apoptosis. It is belived to be a member of the tumour necrosis factor cytokine family. Its amino acid sequence was deduced from a cDNA clone (AAT2796) isolated from a human placental cDNA library. Apo-2 ligand polypeptides, esp. those corresponding to amino acids 114-281, 15-281 or 1-281 of Apo-2 ligand, can be produced by culturing cells transformed or transfected with a vector contg. Apo-2 ligand nucleic acid. They can be used to induce apoptosis in mammals and to treat pathological conditions such as cancer (esp. breast or colon cancer) or to raise antibodies useful in diagnostic assays

AIM-I is a member of the tumour necrosis factor (TNF) ligand superfamily. The products can be used in the diagnosis and treatment of disorders related to under-expression, over-expression or altered expression of AIM-I. AIM-I or agonists can be used for treating expression of AIM-I. AIM-I or agonists can be used for treating immunoproliferative disease lymphadenopathy (IPL), and and arthritis, and allebres, and multiple sclerosis, graft versus host disease, to inhibit neoplasis such as tumour cell growth, to treat restenosis, to regulate haematopoiesis in endothelial cell development, to stimulate peripheral

Its amino acid sequence was deduced from cDNA clone HuAIC (AAT72848), deposited in vector pDC409 as ATCC 69849. Recombinant TRALL polypeptides (esp. soluble polypeptides) can be expressed in host cells and used in the treatment of cancer (e.g. leukaemia, lymphoma and melanoma) and viral infections, or to raise antibodies that may be useful for treating thrombotic

This represents a human tumour necrosis factor related apoptosis ligand apoptositide. The human and murine TRAIL polypeptides can induce apoptosis of Jurkat cells. The encoding nucleic acid sequences are useful for producing the recombinant TRAIL polypeptides, which may be useful in studies of apoptosis, to purify leukaemia, lymphoma or melanoma cells feg. to isolate antigens for vaccine development). The polypeptides can be used to treat leukaemia, lymphoma or melanoma (e.g. by extracorporeal treatment of blood or bone-marrow), or to treat viral infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 MAMMEVQGGPSLGQTCVLIVIFTVLLQSLCVAVTYVYFTNELKQMQDKYSKSGIACFLKE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the human tumour necrosis factor (TNF)-related receptor, TL2 (also known as tumour necrosis factor-related apoptosistinducing ligand, TRAIL). This protein is used in a method resulting in the isolation of the novel human TNF related receptor, TR6. TR6 polypeptides and polynucleotides can be used in the treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune diseases (e.g. inflammatory bowel disease, psoriasis), transplant rejection, graft vs. host disease, inflammatory can exceed autoimmune disease syndrome, restenosis, brain injury, (acquired autoimmune disease syndrome) AIDS, bone diseases, cancer (e.g. lympho-proliferative disorders), atherosclerosis and Alzheimers disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

                                                                                                                                                                                                                                                                                                                       The present sequence represents human AGP-1. AGP-1 is a tumour-necrosis factor (TNF)-related protein, involved in inflammation, myelopoiesis and bone resorption. It has the same nucleic acid and amino acid (aa) sequences as the TNF-related apoptosis-induced ligand (TRALL) described in Immunity, 3 (1995) 673. Antibodies (Ab) are used as immunoassay capenders for detecting AGP-1 expression. Nucleic acid complementary to AGP-1 is used to regulate AGP-1 expression and antagonistic compounds are used to treat inflammation (e.g. rheumatoid arthritis, systemic lupus crythematosus, psoriasis, scleroderma, infection-related inflammation) or bone resorption diseases associated with reduction in the number of bone marrow cells, particularly neutrophils and lymphocytes, e.g. where caused by disease, injury or exposure to myelosuppressive agents. Host cells, transformed with expression vectors containing AGP-1 DNA, are used to

The polypeptides can be used in treatment of neurodegenerative disease, lupus erythematosus, rhuematoid arthritis, and SEP. The polypeptides are apoptotic in central nervous system cells, antigenic and specifically recognise the surface receptor of the TRAIL protein. The polypeptide is a marker of disease and anti-TRAIL antibody or a TRAIL equivalent that binds to specific anticoptors, inhibiting formation of natural complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

This sequence is the human Apo-2 ligand protein, which is recognised by monoclonal antibodies produced by the hybridoma cell lines of the invention. The hybridoma cell lines are deposited under the American Type Culture Collection Accession Numbers: ATCC HB-12256, HB-12257, HB-12258 and HB-12259. The Apo-2 ligand antibodies may be used in diagnostic assays for Apo-2 ligand, e.g. detecting its expression in specific cells, tissues, or serum. The antibodies may also be employed as therapeutics. For instance, anti-Apo-2 ligand antibodies which block Apo-2 ligand activity, like Apo-2 ligand antibodies which increased apoptosis. They are also useful for the affinity purification of Apo-2 ligand from recombinant cell culture or natural sources. The Apo-2 ligand itself may be used to treat diseases e.g. cancer, by inducing apoptosis in cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated monoclonal antibodies having antigen specificity for Apo-2
ligand, e.g. 2G6, 2E11 or 5C2, useful for detecting the expression of Apo
-2 ligand serum, and for treating diseases associated with increased
                                                                                                                                                                                                                                                                                                                                     monoclonal antibody; hybridoma cell line; diagnosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a novel human cytokine, designated Apo-2 ligand Apo-2L. The Apo-2L putpeptide can be produced by standard recombinant methodology. Apo-2L is useful for inducing apoptosis in mammalian cancerells. This is useful for the treatment of cancer. Apo-2L can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autoimmune disorders like lupus and immune-mediated glomerular nephritis and cancer. Apo-2L and its nucleic acid coding sequence can also be used in quantitative and screening diagnostic techniques. Anti-Apo-2L antibodies can be used for treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FYYIXSQTYFRFQEEIKENTKUDKQMVQXIYKYTSYPDPILLMKSARNSCWSKDAEYGLY 240

The present invention describes an antibody that binds to a human protein (I) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434; PRO4954; PRO4054; PRO1805; PRO1805; and PRO2262. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells.

Increased expression of genes encoding (I) can also be detected to diagnose tumours. Agents which inhibit the activity of (I), especially the antibodies, or an antisense oligonucleotide which hybridises to genes encoding (I), can be used to inhibit the present invention can be used to inducing cell death. Methods from the present invention for the present invention to AAC58102 represent PCR primers and hybridisation probes used in camples from the present invention for AAC5812 and AAB24031 to AAB24040 represent human PRO sequences. AAC58103 to AAC5812 and AAB24031 to AAB24040 represent human PRO sequences. Invention
peptides, used to diagnose and inhibit and to identify inhibitors of PRO
                                                                                                                                                                                                                                                                                                          Human; tumour; diagnosis; neoplastic disease; proliferation; cancer; identification; tumourigenesis; anticancer; detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WI;

The specification describes a method for enhanced killing of tumour cells. The method comprises contacting a susceptible tumour cell with a synergistic mixture of a TRAIL receptor ligand and a diterpenoid triepoxide in a combined dosage to kill at least 50 % of the cells. This mixture is synergistic, and so is active at lower doses and against otherwise resistant cell lines. The method is used for killing tumour cells, especially solid tumours or carcinomas (especially mammary carcinoma or non-small cell
                                                                                                                                                                    240

                                                                                                                                                                                                                                                                                                                       ठ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is human AGP-1, a type II transmembrane protein. Fusion proteins comprising an Fc immunoglobulin region fused to the Nerminal portion of the AGP-1 protein have been produced. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-induced disorders. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AGP-1 containing fusion proteins have increased biological activity compared to the soluble AGP-1 proteins used in prior art therapies
                                                                                                                                                                                               240

                                                                                                                                             The present sequence is one of twenty eight novel PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandilar, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120
                                                                                                                                                                                                                                                                                                                                             The present invention relates to a formulation comprising Apo-2 ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability of Apo-2 ligand trimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                       Use of divalent metal ions for making Apo-2 ligand and in formulations containing Apo-2 ligand for increasing yield and stability of ligand trimers, useful for therapeutic applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; tumour necrosis factor; TNF; cytokine; cytostatic; virucide; TNF related apoptosis inducing ligand; TRAIL; cancer; viral infection; human immunodeficiency virus; HIV; leukaemia; gene therapy; lymphoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                The invention relates to a cytokine designated as tumour necrosis factor (TNF) related apoptosis inducting ligand (TRAIL), which induces apoptosis of certain target cells, including cancer cells and virally infected cells. The TRAIL polypeptides are useful in killing cancer cells, in timemodeficiency virus (HIV)) and cancers (e.g. leukaemia, lymphoma and melanoma), as a research reagent useful in studying apoptosis including the regulation of programmed cell death. TRAIL DNA sequences may be employed in developing a gene therapy approach to treating disorders mediated by defective or insufficient amounts of TRAIL, in the production of TRAIL polypeptides and as probes or primers in polymerase chain reactions (PCR). The present sequence is human TRAIL protein

The invention relates to a human tumour necrosis factor (TNF) related
receptor, TR6. TR6 can be expressed by standard recombinant methodology.
The TR6 polypeptides are useful for treating chronic and acute
inflammation, rheumatoid arthritis, septicemia, autcimmune diseases (e.g.
inflammatory bowel disease, psoriasis), transplant rejection, graft vs.
constitution, stroke, ischaemia, acute respiratory disease
syndrome, asthma, restenosis, brain injury, ADDS, bone diseases, cancer,
atherosclerosis, and Alzheimer's disease. These may also be used to
inhibit production of TNR-alpha and eicosanoids, as research reagents and
materials for discovering treatments and diagnostics to animal and human
diseases. The polypeptides may further be used as immunogens to produce
antibodies immunospecific for the TR6 polypeptides. The polynucleotides
cantibodies immunospecific for the TR6 polypeptides. The polynucleotides
constant also be used as hybridization probes for colbna and genomic DNA, for
isolating full-length cDNAs and genomic clones encoding TR6 and of other
genes having high sequence similarity to TR6 gene, and for chromosome
identification. The present sequence represents a human TL2 polypeptide.
TL2 is also known as TRAIL (TNR-related apoptosis-inducing ligand) and is
a ligand for the TL2 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a new method for treating a tumourbearing subject. The method involves administering a combination of 2 to 5 agents comprising dendritic cell mobilisation factor, dendritic cell maturation agent, tumour-killing agent, T cell enhancing factor or activated, antiqen-specific T cells. The method is useful for treating tumours or cancers in a subject e.g. skin cancer, prostate cancer, liver cancer, tumours of the bone, brain or spinal cord, actinic keratosis, or cervical intraspithelial neoplasia. The present amino acid sequence represents the human TRAIL protein that was used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 dendritic cell maturation agent; T cell enhancing factor; skin cancer; antigen-appecific T cell; prostate cancer; liver cancer; bone tumour; brain tumour; spinal cord tumour; cervical intraepithelial neoplasia; actinic keratosis; dendritic cell maturation stimulator; cytostatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to treating an individual at risk for or suffering from infection with a pathogenic or opportunistic organism. The method involves administering a combination of two too five agents comprising:

(a) dendritic cell mobilisation factor; (b) dendritic cell maturation agent; (c) dendritic cell activation agent; (d) T cell enhancing factor; or (e) activated, antigen-pecific T cells. The methods are useful for treating an individual at risk for or suffering from infection with a pathogenic or opportunistic organism, e.g. viruses (e.g. HIV), bacteria c). T. cruzi, which causes Chaga's disease). The methods are especially useful for treating an individual suffering from immunosuppression by chancing a lymphocyte-mediated immune response. In particular, the method is useful for treating inflammations. C) the pathogen from the connected antifection of the presenting coll leukemia or T call lymphoma.                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel method for enhanced killing of tumour cells comprising contacting a tumour cell with a synergistic combination of a death domain receptor ligand and a diterpenoid tripoxide. This method has cytostatic activity and works by blocking TNF-alpha mediated induction of c-IAP2 and c-IAP1. The method of the invention may be used for treating tumours, particularly solid tumours, e.g. carcinoma, mammary adenocarcinoma and non-small cell lung carcinoma also neurological malignancies, heematological malignancies, e.g. non-Hodgkin's lymphoma, chronic lymphocytic leukaemia, malignant cutaneous T-cells, mycosis fungoides, non-MF cutaneous T-cells mycosis cell rich cutaneous lymphoid hyperplasia, bullous pemphigoid, discoid lupus erythematosus, lichen planus. The combination may be administered

                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
with other active agents, e.g. anti- metastatic, anti-tumour or anti-angiogenic agents. The potent synersy between the diterpencies and the death domain ligands allows increased killing at equivalent or lower doses, and can sensitise otherwise resistant cells. This sequence represents the human TNF related apoptosis inducing ligand (TRAIL) protein sequence. TRAIL is a death domain receptor used in the used method of the invention in combination with diterpencial triepoxides to kill tumours by induction of apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of CPT-11 which is a chemotherapeutic agent of the topoisomerase I inhibitor class, and Apo-2 ligand receptor agonist for enhancing apoptosis in mammalian cells, or for treating cancer in a mammal.

The present sequence is that of human Apo-2 ligand (Apo-2L or TRAIL). The invention relates to methods of inducing apoptosis in mammalian cells, and especially to the use of Apo-2L receptor agonists and CPT-11 (a chemotherapeutic agent of the topolomerase I inhibitor class) to chemotherapeutic agent of the topolomerase I inhibitor class) to synergistically induce apoptosis in mammalian cells, in particular mammalian cancer cells, and especially colorectal cancer cells (claimed). The cells may be in cell culture or in a mammal, e.g. a mammal suffering from cancer or a condition in which induction of apoptosis in the cells is desirable. A claimed method of treating cancer in a mammal comprises administering CPT-11 and Apo-2L receptor agonist, where the CPT-11 is administered about 6-72 hours prior to administration of the Apo-2L receptor agonist. Preferred Apo-2L receptor agonist include Apo-2L ceceptor agonist leads to upregulation of DR4 and DR3 receptors, directing the cells towards an apoptotic pathway rather than cell cycle arrest and possible DNA repair, thus providing enhanced antitumour growth by Apo-2L and CPT-11 in athymic nucle mice injected s.c. with human CUCO205 colon carcinoma cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

in prepared the product of mutant of an absolute of mutant gorgen and harbouring a mutant spr gene, the product of mutant spr gene cupresses growth phenotypes exhibited by strains harbouring prc mutants.

(1) is useful for producing a polypeptide, by culturing (I) comprising conncier acid encoding the polypeptide, which is heterologous to the strain, usuch that the nucleic acid is expressed, and recovering the chereologous polypeptide from the strain. The heterologous polypeptide from the strain. The heterologous polypeptide is proteolytically sensitive. Culturing of (I) is performed in a fermentor conditions of high- or low-cell density fermentation. The polypeptide is an antibody (humanised or full-length attibody) or Apo2 ligand. The antibody (humanised or full-length attibody) or Apo2 ligand. The antibody (humanised croft). 2C4, anti-vascular endothedial growth factor (VEGF), anti-tissue factor, 2C4, anti-Host antibody (ragment having a light chain (kappa light chain). The antibody creament having a light chain (kappa light chain). The antibody or anti-CD18 apper fusion, anti-tissue factor Fab'2-leucine zipper fusion, anti-tissue factor Fab'2-leucine zipper fusion, anti-tissue factor Fab'2-leucine zipper fusion with a 6-histidine tag, anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor Fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor fab'2-leucine zipper fusion with a 6-histidine tag, and anti-classe factor fab'2-leucine zipp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                              Novel Escherichia coli strain useful for producing polypeptide, deficient in degP and prc encoding protease, and harboring mutant spr gene, product of gene suppresses growth phenotypes of strains harboring prc mutants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 DDSYWDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a method of producing a population of activated, Cryptococcus neoformans antigen-presenting dendritic cells, comprising causing the obtained dendritic cells to present the antigen and maturing the dendritic cells. The activated, C. neoformans antigen expressing dendritic cells are useful for treating, or as vaccines or vaccine adjuvants against, C. neoformans infection, or for generating antigen-specific T cells. The present sequence is a human protein shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                          Producing a population of activated, Cryptococcus neoformans antigen-
presenting dendritic cells for preventing or treating C. neoformans
infection comprises causing the obtained dendritic cells to present the

The invention discloses isolated, naturally occurring, polypeptide splice variants of human tumour necrosis factor (TNP)-related apoptodis inducing ligand (TRAIL). Apoptosis, or programmed cell death, occurs during normal cellular differentiation and development of multicallular organisms.

Apoptosis is induced by certain cytokines which include TNF and TRAIL CALL organisms.

Apoptosis is induced by certain cytokines which include TNF and TRAIL CALL organisms.

Apoptosis is induced by certain cytokines which include TNF and TRAIL CALL organisms.

TRAIL is a type II membrane protein and nuclear factor-B (NF-B) activation in many tissues and cells. Receptors for TRAIL include two death domain correctly by the intracellular signalling death domain. TRAIL, and profession that the showing significant toxic side effects. Thus TRAIL has the potential to be a very useful antitumour agent. The naturally occurring splice variants may differ in cheir cellular distribution, expression levels/timing and activity.

Determining these factors could provide possible mechanisms for the induction of apoptosis of tumours cells. The splice variant polypeptides and polynucleotides can be used in gene therapy, to raise antibodies, to detect the levels, distribution and ratios of expression of TRAIL, and the splice variants, in a biological sample and to identify compounds which bind the variant TRAIL products and modulate its activity (agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and antagonists). Pharmaceutical compositions, comprising an expression vector or any of the amino acid sequences, are useful for causing a cytocoxic effect in cancer cells and for treatment of diseases which can be ameliorated, cured or prevented by lowering or raising the level of the amino acid sequences. The antibodies may also have a therapeutic utility in blocking or decreasing the activity of the TRAIL variant products. Diseases that may be treated include cancer, neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New splice variants of tumor necrosis factor-related apoptosis inducing ligand (TRAIL) isolated from B-lymphocytes and liver, useful to treat diseases or disorders associated with low expression of the variants.

The invention relates to an Apo-3 polypeptide having an extracellular domain (ECD) sequence and a death domain sequence. The Apo-3 polypeptide to domain (ECD) sequence and a death domain sequence. The Apo-3 polypeptide has been found to stimulate or induce apoptotic activity in mammalian cells. Human Apo-3 exhibits similarities to the tumour necrosis factor ceceptor (TNPR) family of polypeptides. The invention also relates to a chimeric molecule comprising an extracellular domain sequence comprising residues 1-198 of Apo-3 fused to a heterologous amino acid sequence. The Apo-3 polypeptide is useful herapeutically to induce apoptosis in mammalian cells. Decreased levels of apoptosis are associated with diseases such as acquired conditions such as cancer, lugus, and herpes virus infection. Increased levels of apoptosis are associated with diseases such as acquired classase, amyotrophic lateral solerosis, multiple solerosis, retinitis pigmentosa, cerebellar degeneration, aplastic anaemia, myocardial classase, respectivation injury, and toxin-induced liver disease. The Apo-3 polypeptide is also useful in non-therapeutic applications such as in quantitative diagnostic assays as a control against which samples containing unknown quantities of Apo-3 may be prepared, in generating antibodies, as standards in assays for Apo-3, in affinity purification techniques, and in competitive-type receptor binding assays. The chimeric containing unknown quantitically to inhibit apoptosis or nuclear factor -kappa B (NF-kappa B) induction, or as an immunogen for producing anti-content numan Apo-2 ligand protein which is also reported to be involved in apoptotic cell death. In the current invention the apoptotic activity of the Apo-2 ligand protein which is also reported to be involved in apoptotic cell death. In the current invention the apoptotic activity of the Apo-2 ligand protein was measured on human lymphoid cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

                                                                                                                                                                                                                                                                                                                                                                                                                               24-APR-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-MAY-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10-SEP-1998
 The invention relates to an isolated Apo-3 polypeptide. The Apo-3 polypeptides are useful for stimulating or inducing apoptotic activity in mammalian cells e.g. cancer cells, or for in vivo or ex vivo gene therapy techniques. The Apo-3 chimeric molecules are useful for inhibiting apoptosis, or as immunogens used in generating antibodies. The antigonistic antibodies may be used to block excessive apoptosis, for instance in neurodegenerative disease, or to block potential autoimmune/ inflammatory effects of Apo-3 resulting from NF-kappaB activation. The unclease acts sequences are useful as diagnostics for tissue-specific typing, for preparing Apo-3 polypeptides, or for generating transgenic or knockout animals. The transgenic or knockout animals are useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DOSYMDPNDESSMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

```

The invention relates to an isolated secreted and transmembrane polypeptide, designated as PRO polypeptide, PRO polypeptide lacking its associated signal peptide or PRO polypeptide extracellular domain with or without its associated signal peptide. The PRO polypeptide or an antibody binding to it is useful for inhibiting the growth of a tumor cell. A composition containing a PRO polypeptide is useful for inhibiting neoplastic cell growth or for treating a tumour, preferably cancer (such as liver, breast, ovarian, renal, colorectal, uterine, prostate, lung, clader, gastric, pancreatic, vulval, thyroid, central nervous system cancer, hepatic carcinomas, sarcomas, giloblastomas, melanoma or leukaemia) in a mammal. The PRO polypeptide is useful for identifying its agonists. The PRO polypeptide or an antibody binding to it is useful in the preparation of a medicament for treating a condition which is responsive to the PRO polypeptide or an antibody binding to it. The PRO polypeptide or an antibody binding to it. The PRO polypeptide or an antibody binding to it is also useful for treating neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, epithelial, erromal, blastocoellc, inflammatory, angiogenic and immunologic disorders. The present sequence represents the amino acid sequence of a PRO polypeptide of the invention

Measurement of the expression level of TNF related apoptosis inducing ligand gene for diagnosis and examination of allergic disease and screening agents for allergic disease treatment.

Disclosure; Page 51-52; 58pp; Japanese.

comprises measuring the expression level of timour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL) gene in a specimen from the patient and comparing this level with the level in healthy persons. TRAIL gene expression is decreased in patients. The nucleic acids and polypeptide can be used to screen for agents for the treatment of allergic diseases, possibly using a transgenic rodent as a model animal for the disease, with effectiveness determined by changes in expression levels or protein activity. The method is useful for the diagnosis, examination, prevention and treatment of allergic diseases, including atopic skin inflammation. The sequence presented is the human TRAIL The invention discloses a method for examining allergic diseases, which

tumour necrosis factor (TMF) -related apoptosis inducing ligand (TRAIL)

receptors (TRAIL-R). Antibodies of the invention are useful for treating,

receptors (TRAIL-R). Antibodies of the invention are useful for treating,

preventing or ameliotating cancer (e.g. cancers of paroreas, uterine,

breast, colon, lung and gastrointestine and Kaposi's sarcoma) and other

hyperproliferative disorders, neurodegenerative disorders (e.g.

colorimanne disorders, Alaheimer's disease and Huntingfoon's disease),

autoimmune disorders (e.g. lupus, rheumatoid arthritis, multiple

sclerosis, myasthenia gravis, Hashimot's disease and immunodeficiency

syndrome), inflammatory disorders (e.g. asthma, allorgic disorders and

rheumatoid arthritis), infectious diseases (e.g. acquired immune

deficiency syndrome; AlDS, herpes viral infections and other viral

infections), myelodysplastic syndromes (e.g. aplastic anaemia), graft-

cersus-host disease, ischaemic injury, liver injury, toxin-induced liver

disease, septic shock, cachexia, anorexia and proliferative disorders.

Antibodies of the invention are also useful for treating cardiovascular

disorders cerebrovascular disorders, thrombotic microangiopathies,

disorders, cerlar disorders associated with neovascularisation, psoriasis,

and ulcerative colitis and for wound healing. The invention is also used

thopselvery accines. The present sequence is human TRAIL protein also

The invention relates to an antibody that specifically binds: (a) the human tumor necrosis factor (TMF) related apoptosis inducing ligand (TMRIL) protein appearing as ABU08558; (b) a soluble human TRAIL polypeptide; (c) a polypeptide comprising amino acids 124-276 of ABU08558, or (d) a fragment of the TRAIL protein. Also included is an antigen-binding fragment of the antibody (a monoclonal antibody), a sasys to detect the presence of TRAIL polypeptides, either in vitro or in vivo, purifying TRAIL by affinity chromatography, blocking binding of TRAIL, to target cells and thus inhibiting a biological activity of TRAIL. The antibody is useful for treating disorders mediated or exacerbated by TRAIL, e.g. thrombotic microangiopathies, e.g. thrombotic transcribed by TRAIL, e.g. thrombotic microangiopathies, e.g. thrombotic chromotycytopaenic purpura (TTP), adult haemolytic uraemic syndrome (HUS) (even though it can strike children as well) small blood vessel clotting disorders e.g., cardiac problems in paediarric AIDS patients and systemic lupus erythematosus (SLE). The present sequence represents human TRAIL

The present sequence is the protein sequence of human TRAIL polypeptide.

The invention relates to compositions comprising heterotrimeric complexes of tumour necrosis factor (TNP) ligand family members, and their use in the detection, prevention and treatment of disease. In one embodiment, the heterotrimeric complex comprises full-length or extracellular portions of TRAIL and full-length or extracellular portions of of other TNP ligand family members, preferably RAMIL. The heterotrimeric complexes of the invention are useful for treating an autoimmune disease, cancer or osteoporosis, and particularly for inhibiting cancer cell proliferation, increasing a cells. A claimed method of inducing apoptosis of Teals comprises administering a heterotrimeric complex consisting of FasL and LIGHT, TNP-alpha, the proliferation involves administering a heterotrimeric complex consisting of TRAIL and CD40L or RANK. A claimed method of treating osteoporosis of TRAIL and CD40L or RANK. A claimed method of treating osteoporosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DDSYMDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The invention relates to an isolated antibody comprising a first amino acid sequence having 95 % identity to a second amino acid sequence of either variable heavy chain or light chain-complementerity determining regions (VHCDR1) /VLCDR2 or VHCDR3/VLCDR3 appearing as ABG71906-ABG71911 being specific for human TRAL1 receptors 1-4 (TNF (tumour necrosis factor)-related apoptosis-inducing ligand receptor, also known as TR4, TR5, TR7 and TR10). Also included are an isolated cell that produces the antibody, an antibody that binds the same epitope on a TR4 polypeptide as the antibodies detailed above, detecting expression of a TR4 polypeptide (or detecting, diagnosing, prognosing or monitoring
